

A Simple Way to Improve Cellular Coverage and Safety in Your School.

Your campus needs reliable cellular coverage. According to the National Emergency Number Association, 80% of 911 calls are made from wireless devices. That number will continue to rise. WilsonPro’s customized cellular signal repeaters improve coverage in any building.

Why WilsonPro?

- Improve safety and security for teachers, staff, and students
- Enable collaboration between schools, educators, students, staff, parents, and community partners
- Encourage cellular technology for classroom use
- Amplify cellular signal on every carrier network indoors

How do cellular signal repeaters work?

The receiver antenna picks up nearby cellular signal, no matter how weak. The signal is then amplified by the repeater. This strengthened signal is broadcast by the server antennas to all nearby cellular-connected devices.

Success Stories

“The impact was huge. We are able to communicate very easily now. When a teacher needs something right away, they’re now able to text for help.”

Lisa Muirbrook - Principal at Art City Elementary
